

Set default timezone by date_default_timezone_set

When you want to set the default timezone used by all date/time functions, you can take one of two options: 1) put `date_default_timezone_set()` on your code, 2) put value in `php.ini`

Option 1 - by code

You can set the default timezone by following function in the PHP

```
date_default_timezone_set ( string $timezone_identifier ) : bool
```

And the below is the example:

```
date_default_timezone_set('Asia/Seoul');
```

You can get more timezone information at <https://www.php.net/manual/en/timezones.php>

Option 2 - by php.ini

Below is simple, and no need to add code every time, but may need to be careful when you have any possibility to migrate onto the different systems that does not have the same `php.ini` settings.

/etc/php.ini

```
[Date]
; Defines the default timezone used by the date functions
; http://php.net/date.timezone
date.timezone = Asia/Seoul
```
