

Page break on confluence content

In case that you need a page break between para graphs, you will need to add following HTML tags

To make it simpler, you can add above scripts as user created macro. Followings are the steps you can add it as macro on your confluence.

1. Move to General Configuration User Macros Create a User Macro

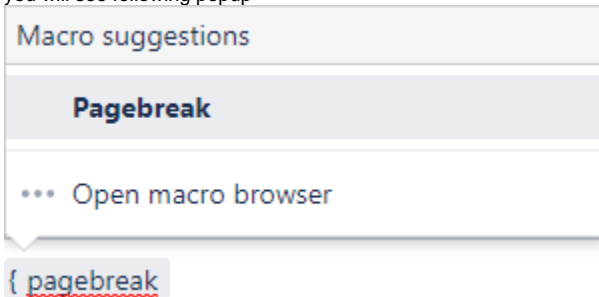

2. Fill the content as following

Field	Value
Macro name	pagebreak
Visibility	Visible to all users in the Macro Browser
Macro Title	pagebreak
Description	Gives page break upon PDF export
Categories	Confluence Content
Icon URL	You can leave this field blank
Documentation URL	You can leave this field blank
Macro body processing	No macro body
Template	Enter the code below in the template field. <div>## @noparams <div style="page-break-before:always;"></div></div>

3. Click Save
4. Edit your content and type as following

```
{pagebreak}
```

you will see following popup

5. Once everything is okay, you will see following macro on the content
