

Getting an email in a single mailbox with multiple domain name at G Suite

I have lots of domain name and use G Suite for a single domain. I needed to create a mail account for one of another domain names, and tried to find a way to combine with the existing G Suite domain. Following procedure enables you to combine your G Suite with multiple domain names.

STEP 1. Connect to Google Admin at <https://admin.google.com/ac/home>

ADD A DOMAIN ALIAS

STEP 2. Click "Domains" Click "Manage domains" Click on top of the page

Then you will see following diagram, and you can put your domain name that you want to combine with the existing G Suite domain name.

Add a domain alias of kurapa.com

Automatically create an alias for every user in the primary domain, giving them an alternate email address at a domain name you own.

Enter a domain alias

Examples: example.com, sub.example.com

[CANCEL](#) [CONTINUE AND VERIFY DOMAIN OWNERSHIP](#)

STEP 3. Verify your domain name

cfolder.com

Activate domain alias

Then you will see below page. In my case, I just selected "Other" for domain name provider, and copied the TXT record below to the DNS configuration.

Verify your ownership of <http://cfolder.com/>. [Learn more.](#)

Your Google Account will be recorded in Google's systems as an official owner of this property.
Note - your ownership information will be stored and be visible to other owners (both current and future).

Recommended method

Alternate methods

Recommended: Domain name provider

Sign in to your domain name provider.

Other

Follow the steps below to create a DNS (Domain Name System) record that proves to Google that you own the domain.

1. Add the TXT record below to the DNS configuration for cfolder.com.

`google-site-verification=0EakgcJxSMJTGySdBv75pkgcJxSMJTGySdEV1Yx3E3w`

2. Click Verify below.

When Google finds this DNS record, we'll make you a verified owner of the domain. (Note: DNS changes may take some time. If we don't find the record immediately, we'll check for it periodically.)

To stay verified, don't remove the DNS record, even after verification succeeds.

Note: adding this record won't affect your mail flow or any other feature in any way.

Having trouble? Try an alternate option.

- [Add a CNAME record.](#)
- Contact your domain name provider directly for further assistance.

VERIFY

Not now

In my case, I use dnszi.com, so simply did as following:

도메인	텍스트(TXT)
<input type="text"/> ,cfolder.com	IN TXT "google-site-verification=0EakgcJxSMJTGySdasdasdaswcUXngbge"
<div>도메인 설명(TXT) 추가</div>	

It may usually takes 2 hours, but may takes 72 hours in some cases - that is usually based on the TTL(Time To Live) value defined in the DNS configuration.

If every thing is okay, you will see message like below:

Congratulations, you have successfully verified your ownership of worldmm.com.

Continue

STEP 4. Setup MX record in the DNS configuration based on the guide from G Suite once verification is done on STEP 3

You can simply do it by click "Set up google MX records"

cfolder.com

Verified [Set up Google MX records](#) Recommended
Or, [Skip Google MX setup](#) Rarely used

Below is the list of MX Server address I got

MX Server address	Priority
ASPMX.L.GOOGLE.COM	1
ALT1.ASPMX.L.GOOGLE.COM	5
ALT2.ASPMX.L.GOOGLE.COM	5
ASPMX2.GOOGLEMAIL.COM	10
ASPMX3.GOOGLEMAIL.COM	10

And below is what I have done at dnszi.com - you may able to do that like me based on your environment

▶ 메일서버(MX) 변경/삭제					
<input type="checkbox"/>	번호	MX(메일서버)	메일서버	우선순위	관리
<input type="checkbox"/>	1	cfolder.com	ALT2.ASPMX.L.GOOGLE.COM	5	E X
<input type="checkbox"/>	2	cfolder.com	ALT1.ASPMX.L.GOOGLE.COM	5	E X
<input type="checkbox"/>	3	cfolder.com	ASPMX3.GOOGLEMAIL.COM	10	E X
<input type="checkbox"/>	4	cfolder.com	ASPMX2.GOOGLEMAIL.COM	10	E X
<input type="checkbox"/>	5	cfolder.com	ASPMX.L.GOOGLE.COM	1	E X
				선택수정	선택삭제

If everything is okay, now you can receive an email in a single mail box with multiple domains.

You can also add mail alias if you want it. For example, you add [foo@your_domain.com](#) to [your_original_email@your_domain.com](#). It can be done at "Users" on Google Admin
