

Install lynx on CentOS 7 / CentOS 8

I usually use lynx to check website on my terminal, because it does not require to be on graphical environment - meaning I can see its content on terminal console. It can be installed by adding PowerTools repository in Yum.

For CentOS 8

STEP 1. `vim /etc/yum.repos.d/CentOS-PowerTools.repo` and set `enabled=1`

```
# CentOS-PowerTools.repo
#
# The mirror system uses the connecting IP address of the client and the
# update status of each mirror to pick mirrors that are updated to and
# geographically close to the client. You should use this for CentOS updates
# unless you are manually picking other mirrors.
#
# If the mirrorlist= does not work for you, as a fall back you can try the
# remarked out baseurl= line instead.
#
#
[PowerTools]
name=CentOS-$releasever - PowerTools
mirrorlist=http://mirrorlist.centos.org/?release=$releasever&arch=$basearch&repo=PowerTools&infra=$infra
#baseurl=http://mirror.centos.org/$contentdir/$releasever/PowerTools/$basearch/os/
gpgcheck=1
enabled=1
gpgkey=file:///etc/pki/rpm-gpg/RPM-GPG-KEY-centosofficial
```

STEP 2. run `yum install lynx`

For CentOS 7

For Centos 7

STEP 1. Enable the EPEL repository

```
sudo yum -y install http://rpms.remirepo.net/enterprise/remi-release-7.rpm
```

STEP 2. Update the system after the installation of the EPEL repository

```
sudo yum update
```

STEP 3. Install **lynx**

```
sudo yum install -y lynx
```
