

Redirect from an HTML page

Page redirection is a situation where you clicked a URL to reach a page A but you were directed to another page B. It happens due to page redirection. To redirect from an HTML page, use the META Tag. With this, use the http-equiv attribute to provide an HTTP header for the value of the content attribute. The value in the content is the number of seconds; you want the page to redirect after.

Set the content attribute to 0, if you want it to load immediately.

```
<!DOCTYPE HTML>
<html>
<head>
<meta http-equiv="refresh" content="seconds; url=URL"/>
</head>
<body>
</body>
</html>
```

Example

```
<!DOCTYPE html>
<html>
  <head>
    <title>HTML Meta Tag</title>
    <meta http-equiv = "refresh" content = "2; url = https://www.tutorialspoint.com" />
  </head>
  <body>
    <p>Hello HTML5!</p>
  </body>
</html>
```
