

libstdc++.so.6: version `GLIBCXX_3.4.20' not found error

When I run biftool on CentOS 7, faced following errors:

```
/pub/production/_lib/bif/biftool: /lib64/libstdc++.so.6: version `GLIBCXX_3.4.20' not found (required by /pub/production/_lib/bif/biftool)
/pub/production/_lib/bif/biftool: /lib64/libstdc++.so.6: version `CXXABI_1.3.9' not found (required by /pub/production/_lib/bif/biftool)
/pub/production/_lib/bif/biftool: /lib64/libstdc++.so.6: version `GLIBCXX_3.4.21' not found (required by /pub/production/_lib/bif/biftool)
```

Below commands are the easiest way can avoid above errors on CentOS 7 - note that you should run below in root.

```
wget https://repo.anaconda.com/archive/Anaconda3-2019.07-Linux-x86_64.sh
sh Anaconda3-2019.07-Linux-x86_64.sh
```

```
cd
cp anaconda3/lib/libstdc++.so.6.0.26 /usr/lib64
```

```
rm -f /usr/lib64/libstdc++.so.6
ln -s /usr/lib64/libstdc++.so.6.0.26 /usr/lib64/libstdc++.so.6
```

If you want to uninstall Anaconda

```
conda install anaconda-clean
```

You may also need to remove anaconda on your root directory.
