

tee - append to a file using the tee command

tee is a command-line utility in Linux that reads from the standard input and writes to both standard output and one or more files at the same time.

Example 1: Append the text output to the file use tee with the -a (--append) option

```
echo "this is a new line" | tee -a file.txt
```

Example 2: Append text to a file that you don't have permission to, prepend sudo before tee

```
echo "this is a new line" | sudo tee -a file.txt
```

Example 3: Append text to more than one file

```
echo "this is a new line" | tee -a file1.txt file2.txt file3.txt
```
