Close tabs in a browser that are associated with a specific domain like "foo.com" using JavaScript code

You can close tabs in a browser that are associated with a specific domain like "foo.com" using the following JavaScript code

```
function close_tabs(domain_name)
{
        // get all the open windows
        var windows = window.open('', '_blank');

        // loop through all the open windows
        for (var i = 0; i < windows.length; i++)
        {
                // check if the window's URL includes domain_name
                if (windows[i].location.href.indexOf(domain_name) > -1)
                {
                        // close the window
                        windows[i].close();
                }
        }
}

close_tabs( "foo.com");
```
