

# [Resolved] Error occurred during template rendering on confluence 8.5.3

My confluence 8.5.3 makes **template rendering error** after upgrading from 8.0.4 - previously it worked normally on 8.0.4. v8.0.4 is always triggering error - ThreadLocalCache is not initialised. Could not retrieve value for key GLOBAL\_SETTINGS

- [Operation Environment](#)
- [Expected Result:](#)
- [Reference data: confluence-8.5.3 upgrade prompt log](#)
- [Reference data from the server v8.5.3: HTML script - Error occurred during template rendering. Contact your administrator for assistance.](#)
- [Reference data : Browser Error based on the server v8.5.3](#)
- [Reference data: atlassian-confluence.log based on the server v8.5.3](#)
- [Reference data: atlassian-confluence.log based on the server v8.0.4](#)
- [Other links helpful](#)
- [How to resolve?](#)

## Operation Environment

- OS: Centos 7
- Database: PostgreSQL 14.10
- Connected issue at [Atlassian Communit](#)

## Expected Result:

Confluence 8.5.3 display the data normally that is upgraded/migrated from 8.0.4

Now it displays as

**Error occurred during template rendering. Contact your administrator for assistance.**

## Reference data: confluence-8.5.3 upgrade prompt log

```

Starting Installer ...

This will install Confluence 8.5.3 on your computer.
OK [o, Enter], Cancel [c]
o
Click Next to continue, or Cancel to exit Setup.

Choose the appropriate installation or upgrade option.
Please choose one of the following:
Express Install (uses default settings) [1],
Custom Install (recommended for advanced users) [2],
Upgrade an existing Confluence installation [3, Enter]
3
Existing installation directory:
[/opt/atlassian/confluence]

The upgrade process will automatically back up your Confluence Installation
Directory. You can also choose to back up your existing Confluence Home
Directory. Both directories are backed up as zip archive files in their
respective parent directory locations.

We strongly recommend choosing this option in the unlikely event that you
experience problems with the upgrade and may require these backups to
```

restore your existing Confluence installation.

If you have many attachments in your Confluence Home Directory, the zip archive of this directory may consume a significant amount of disk space.

Back up Confluence home ?

Yes [y], No [n, Enter]

n

Checking for local modifications.

SLF4J: No SLF4J providers were found.

SLF4J: Defaulting to no-operation (NOP) logger implementation

SLF4J: See <https://www.slf4j.org/codes.html#noProviders> for further details.

List of modifications made within Confluence directories.

The following provides a list of file modifications within the confluence directory.

Modified files:

confluence/WEB-INF/web.xml

conf/server.xml

bin/setenv.sh

Removed files:

(none)

Added files:

confluence/sitemap.xml

confluence/WEB-INF/classes/log4j-diagnostic.properties

confluence/robots.txt

[Enter]

Checking if your instance of Confluence is running

Back up your external database

We strongly recommend you back up your Confluence database if you have not already done so.

Please refer to the following URL for back up guidelines:

<https://docs.atlassian.com/confluence/docs-85/Production+Backup+Strategy>

Check app compatibility

Check that your non-bundled apps are compatible with Confluence 8.5.3.

Access the plugin manager through the following URL:

<http://localhost:8090/plugins/servlet/upm#compatibility>

For more information see our documentation at the following URL:

<https://docs.atlassian.com/confluence/docs-85>

/Installing+and+Configuring+Plugins+using+the+Universal+Plugin+Manager

Please ensure you have read the above checklist before upgrading.

Your existing Confluence installation is about to be upgraded!

The upgrade process will shut down your existing Confluence installation to complete the upgrade.

Do you want to proceed?

Upgrade [u, Enter], Exit [e]

u

Your instance of Confluence is currently being upgraded.

Shutting down Confluence...

## Other links helpful

- <https://my.atlassian.com/products/index>
- <https://www.atlassian.com/software/confluence/download-archives>
- <https://confluence.atlassian.com/confkb/after-upgrading-confluence-shows-error-occurred-during-template-rendering-contact-your-administrator-for-assistance-error-1283491784.html>

## How to resolve?

This issue is resolved to delete some data records based on the guide at

- [CONFKB: After upgrading Confluence shows "Error occurred during template rendering. Contact your administrator for assistance" error.](#)

What I did was

1. backup just in case
2. delete records based on the above guide before upgrading confluence
3. upgrde confluence server
4. restart

I hope this helps for others.
