

# Reboot server if Google DNS does not respond

The below sh script trigger rebooting server if Google DNS does not respond

```
#!/bin/sh
ping -w 10 -c 1 8.8.8.8
if [ $? = 0 ]
then
    echo noreply
else
    /sbin/reboot
fi
```

In the AsusWrt, the below script works good

**/jffs/scripts/reboot\_if\_ping\_does\_not\_work**

```
#!/bin/ash

if [ $( ping -c 1 google.com | grep ttl | wc -l ) -eq 0 ]
then
    echo noreply
    /sbin/reboot
else
    echo "google.com is reachable"
fi
```
