My Centos does not have X Windows, how do I install it?

I haven't installed any graphical interface like X Window on Centos, and found its solution how to install it for my personal purpose. Please take a look below steps to install "Gnome Shell" as a main graphical interface.

STEP 1. Install X Window System

yum groupinstall "X Window System"

STEP 2. To add the Gnome Shell desktop on CentOS 7, you would do:

 $\verb|yum| install| gnome-classic-session| gnome-terminal| nautilus-open-terminal| control-center| liberation-mono-fonts| and the state of the state o$

This would provide you with a minimal Gnome Desktop environment. You do have to do a couple of other steps:

unlink /etc/systemd/system/default.target
ln -sf /lib/systemd/system/graphical.target / /etc/systemd/system/default.target

This will allow it to start on boot as you are setting it for the default boot target runlevel.
